

The diagram illustrates two types of neural pathways: Coding and NMDA Sensitive.

Coding Pathway: This pathway is shown in three rows. Each row starts with a black rectangular block, followed by a series of arrows pointing to a blue rectangular block. This is followed by another series of arrows pointing to a black rectangular block. The pathway then continues with a series of black rectangular blocks connected by arrows, ending with a black rectangular block.

NMDA Sensitive Pathway: This pathway is shown in a single row. It starts with a black rectangular block, followed by a series of arrows pointing to a black rectangular block. This is followed by another series of arrows pointing to a black rectangular block. The pathway then continues with a series of black rectangular blocks connected by arrows, ending with a black rectangular block.
